

# ELISA Kit for Matrix Metalloproteinase 9 (MMP9)

Catalog No: tcue3323

## Available Sizes

Size: 96T

## Specifications

### Research Area:

Enzyme & Kinase; Tumor immunity; Infection immunity; Cardiovascular biology; Hepatology;

### Species Reactivity:

Canis familiaris; Canine (Dog)

### Sample Type:

Serum, plasma and other biological fluids

### Sensitivity:

The minimum detectable dose of this kit is typically less than 1.22ng/mL

### Detection Range:

3.12-200ng/mL

### Assay Time:

3h

### Detection Method:

Enzyme-linked immunosorbent assay for Antigen Detection.

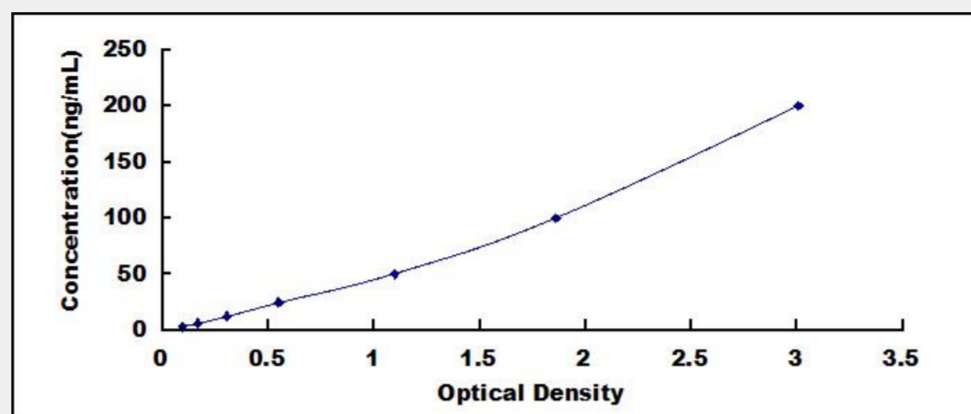

### Tested Application:

ELISA

## Test Principle

The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate provided in this kit has been pre-coated with an antibody specific to Matrix Metalloproteinase 9 (MMP9). Standards or samples are then added to the appropriate microtiter plate wells with a biotin-conjugated antibody specific to Matrix Metalloproteinase 9 (MMP9). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain Matrix Metalloproteinase 9 (MMP9), biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color.

The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of  $450\text{nm} \pm 10\text{nm}$ . The concentration of Matrix Metalloproteinase 9 (MMP9) in the samples is then determined by comparing the O.D. of the samples to the standard curve.

All products are for RESEARCH USE ONLY. Not for diagnostic & therapeutic purposes!
