

Mouse Anti-Human IgG Antibody- sodium azide free Catalog No: tcna1000saf

Ava	ilable Sizes
Size: 100ug	
Spe	cifications
Application FACS, IF, IH	
Species Re Human. Oth	e activity: er species not known.
Host Speci Mouse	es:
_	n / Amino acids: nan Ig Gamma Chain was used as the immunogen for this IgG antibody.
Conjugatio Unconjugate	
Clonality: Monoclonal	
Clones: IG217	
Isotype: Mouse IgG1	, kappa
Form: Liquid	
Storage Bu	Iffer: LX PBS; BSA free, sodium azide free

Recommended Dilution:

Flow Cytometry: 0.5-1ug/million cells in 0.1ml

Immunofluorescence: 0.5-1ug/ml

Immunohistochemistry (Formalin/paraffin) 0.5-1ug/ml for 30 minutes at RT (1)

Prediluted format: incubate for 30 min at RT (2)The optimal dilution of the IgG antibody for each application should

be determined by the researcher.

1. Staining of formalin-fixed tissues requires boiling tissue sections in 10mM citrate buffer pH 6.0

for 10-20 min followed by cooling at RT for 20 minutes.

2. The prediluted format is supplied in a dropper bottle and is optimized for use in IHC. After epitope retrieval step (if required)

drip mAb solution onto the tissue section and incubate at RT for 30 min.

Storage Instruction:

Store the IgG antibody at 2-8oC (with azide) or aliquot and store at -20oC or colder (without azide).

SwissProt:

P01857, P01859, P01860, P01861

Protein G affinity chromatography

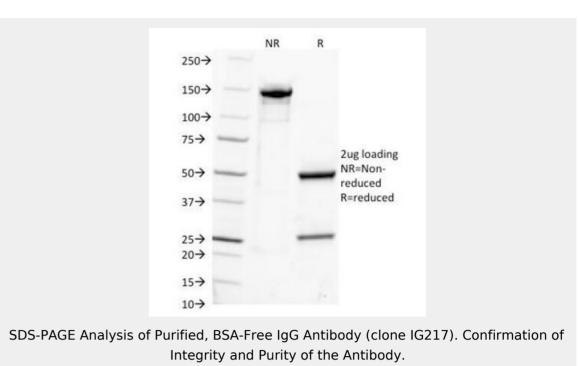

Product Description

Recognizes a protein of 75kDa, identified as gamma heavy chain of human immunoglobulins. It reacts with all sub-classes of gamma chain of human immunoglobulins. It does not cross-react with alpha (IgA), mu (IgM), epsilon (IgE), or delta (IgD), heavy chains, T-cells, monocytes, granulocytes, or erythrocytes. This mAb is useful in the identification of leukemias, plasmacytomas, and certain non-Hodgkin\'s lymphomas. The most common feature of these malignancies is the restricted expression of a single heavy chain class. Demonstration of clonality in lymphoid infiltrates indicates that the infiltrate is clonal and therefore malignant.
