

ACHN

Catalog No: tcel21

Available Sizes

Size: 1×10⁶cells/t25culturebottle

Specifications

Application:

ACHN may be of use for antiproliferative studies using human interferons or interferon inducers.

Subculturing:

Remove and discard culture medium. Briefly rinse the cell layer with DPBS solution to remove all traces of serum that contains trypsin inhibitor. Add 1.0 to 2.0 mL of Trypsin-EDTA solution to flask and observe cells under an inverted microscope until cell layer is dispersed (usually within 2 to 3 minutes). Cells that are difficult to detach may be placed at 37°C to facilitate dispersal. Add 4.0 to 6.0 mL of complete growth medium and aspirate cells by gently pipetting. Add appropriate aliquots of the cell suspension to new culture vessels.

Product Description

Growth is inhibited by human interferon [Hogan, T. F., personal communication].
