

## **BT-549**

**Catalog No: tcel41** 

Available Sizes

Size: 1×10<sup>6</sup> cells/t25 culture bottle

Specifications

## **Application:**

transfection host

## Subculturing:

Remove and discard culture medium. Briefly rinse the cell layer with DPBS solution to remove all traces of serum that contains trypsin inhibitor. Add 1.0 to 2.0 mL of Trypsin-EDTA solution to flask and observe cells under an inverted microscope until cell layer is dispersed (usually within 2 to 3 minutes). Cells that are difficult to detach may be placed at 37°C to facilitate dispersal. Add 4.0 to 6.0 mL of complete growth medium and aspirate cells by gently pipetting. Add appropriate aliquots of the cell suspension to new culture vessels.

## **Product Description**

The established population is polymorphic with epithelial like components and multinucleated giant cells. A mucin-like material was secreted into the medium.
