

CHL

Catalog No: tcel60

Available Sizes

Size: 1×10^6 cells/t25culturebottle

Specifications

Application:

transfection host derived from RPMI 7932 that can grow to a higher density, namely 5×10^7 cells/mL.

Subculturing:

Remove and discard culture medium. Briefly rinse the cell layer with DPBS solution to remove all traces of serum that contains trypsin inhibitor. Add 1.0 to 2.0 mL of Trypsin-EDTA solution to flask and observe cells under an inverted microscope until cell layer is dispersed (usually within 2 to 3 minutes). Cells that are difficult to detach may be placed at 37°C to facilitate dispersal. Add 4.0 to 6.0 mL of complete growth medium and aspirate cells by gently pipetting. Add appropriate aliquots of the cell suspension to new culture vessels.

Product Description

This cell line produces about 0.1 mU of t-PA per cell per day.
