

# HCC827

**Catalog No: tcel94**

## Available Sizes

**Size:** 1×10<sup>6</sup>cells/t25culturebottle

## Specifications

### Subculturing:

Remove and discard culture medium. Briefly rinse the cell layer with DPBS solution to remove all traces of serum that contains trypsin inhibitor. Add 1.0 to 2.0 mL of Trypsin-EDTA solution to flask and observe cells under an inverted microscope until cell layer is dispersed (usually within 2 to 3 minutes). Cells that are difficult to detach may be placed at 37°C to facilitate dispersal. Add 4.0 to 6.0 mL of complete growth medium and aspirate cells by gently pipetting. Add appropriate aliquots of the cell suspension to new culture vessels.

## Product Description

This lung adenocarcinoma has an acquired mutation in the EGFR tyrosine kinase domain(E746-A750 deletion).
