

## RF / 6A

**Catalog No: tcel194**

### Available Sizes

---

**Size:**  $1 \times 10^6$  cells/t25culturebottle

---

### Specifications

---

#### **Application:**

Late passage cells have been used as feeder layers to enhance attachment, subcultivation and maintenance of uveal melanocytes.

---

#### **Subculturing:**

Remove and discard culture medium. Briefly rinse the cell layer with DPBS solution to remove all traces of serum that contains trypsin inhibitor. Add 1.0 to 2.0 mL of Trypsin-EDTA solution to flask and observe cells under an inverted microscope until cell layer is dispersed (usually within 2 to 3 minutes). Cells that are difficult to detach may be placed at 37°C to facilitate dispersal. Add 4.0 to 6.0 mL of complete growth medium and aspirate cells by gently pipetting. Add appropriate aliquots of the cell suspension to new culture vessels.

---

### **Product Description**

Weibel-Palade granules are seen by electron microscopy.
