

## SK-BR-3 [SKBR3]

Catalog No: tcel211

### Available Sizes

---

**Size:** 1×10<sup>6</sup>cells/t25culturebottle

---

### Specifications

---

**Application:**

transfection host

---

**Subculturing:**

Remove and discard culture medium. Briefly rinse the cell layer with DPBS solution to remove all traces of serum that contains trypsin inhibitor. Add 1.0 to 2.0 mL of Trypsin-EDTA solution to flask and observe cells under an inverted microscope until cell layer is dispersed (usually within 2 to 3 minutes). Cells that are difficult to detach may be placed at 37°C to facilitate dispersal. Add 4.0 to 6.0 mL of complete growth medium and aspirate cells by gently pipetting. Add appropriate aliquots of the cell suspension to new culture vessels.

---

### Product Description

The patient, a White, Caucasian female, age 43, blood type A<sub>1</sub>, had been treated with radiation, steroids, cytoxan and 5-fluorouracil. No virus particles. Ultrastructural features include microvilli and desmosomes, glycogen granules, large lysosomes, bundles of cytoplasmic fibrils. The SK-BR-3 cell line overexpresses the HER2/c-erb-2 gene product.
